Bio

“Since forming in 2021, Earth Freaks have worked at a feverish rate and continued to push themselves in a fashion that can be described as nothing short of miraculous. The four piece, which trained at Selkirk College’s renowned music program, has shown no signs of slowing down from the time of its inception: a jam-packed summer in 2022 saw constant touring around British Columbia’s Interior, including opening the Canada Rock Fest in Grand Forks, performing at the Nelson International Mural Fest and RED Mountain Ski Resort’s Oktoberfest, as well as a string of sold out 3 hour marathon shows at The Royal in Nelson.

The release of two singles last August - *Heavy Sunshine* and *Colour Tones* - proved to be sound evidence of the engaging, feel good songwriting that is characteristic from Earth Freaks, and was followed up by a full length debut album at the end of the year. March 2023 saw the release of the group’s latest single, the fan favourite 'Remedy,' as well as their first venture outside of Canada as they brought their high-energy live experience to Mexico for a run of shows supporting reggae legends, 'Antidoping' and 'Los Pericos.'

Summer 2023 is sure to be the busiest chapter yet for these young rockers. After relocating to Victoria last Fall, the group has been working tirelessly to write and record new material and practice their incendiary stage experience [which often inspires crowd surfing, stage diving, and all out dance party mayhem within the audience]. The infectious charm that emanates from Earth Freaks is clearly the result of four best friends doing what they love most: making music that makes you want to move, and having fun while doing it.”
